- MySQL
- HTML5, CSS3
- Git
- RESTful APIs

YASH DHIMAN

PHP Laravel Developer
3 Years Experience

PROFILE

PHP Laravel Developer with 3 years of experience in designing, developing, and maintaining scalable web applications using Laravel, Core PHP, MySQL, , HTML, CSS, AI Tools and REST APIs. Experienced in MVC architecture, authentication, role-based access control, third-party API integration, automation using Selenium, and maintaining production applications. Currently expanding expertise in Vue.js and modern full-stack development. Strong problem-solving skills with experience working directly with clients and cross-functional teams.

WORK EXPERIENCE

GLOCIFY TECHNOLOGIES (Chandigarh) Jan 2025 - PRESENT

PHP Developer

(Project: ShopSphere – E-commerce Platform)
Technology Stack: Laravel 12, Vue.js 3, MySQL, REST API, Sanctum, Stripe, JavaScript, HTML, Live Demo: <https://shopsphere-frontend-one.vercel.app/>

- Developed a full-stack e-commerce platform using Laravel 12 and Vue.js 3 following the MVC architecture.
- Built secure RESTful APIs for product management, authentication, shopping cart, order management, and user management.
- Implemented Laravel Sanctum for token-based API authentication and protected application routes.
- Developed complete CRUD operations with server-side validation, file/image upload, and optimized database interactions using Eloquent ORM.
- Integrated Stripe Payment Gateway with webhook handling to securely process online payments and update order status.
- Generated PDF invoices for customer orders and enabled invoice download functionality.
- Implemented email notification system to automatically send order confirmations and invoices after successful payment.
- Designed and optimized MySQL database relationships using Eloquent ORM.
- Built responsive Admin and Customer dashboards with dynamic data rendering using Vue.js.
- Implemented product catalog, category management, order management, role-based access control, and search functionality.
- Collaborated using Git and followed clean coding practices to develop scalable and maintainable applications.

(Project: Get My Invoices)
Technology Stack: Core PHP, Selenium WebDriver, HTML, JavaScript, CSS

- Developed and maintained automation solutions for downloading invoices from multiple client portals using Selenium WebDriver integrated with Core PHP.
- Automated complex browser workflows including authentication, navigation, form submission, Shadow DOM interactions, and PDF invoice downloads.
- Implemented solutions to handle dynamic web elements and customized techniques for CAPTCHA-based workflows.
- Built automation scripts to organize downloaded invoices and documents efficiently.
- Optimized existing automation scripts, improving execution performance and maintainability.

SOFT SKILLS

- Client Handling
- Problem-Solving
- Team Collaboration
- Adaptability
- Multitasking
- Critical & Logical Thinking

LANGUAGES

- ENGLISH
- HINDI

- Worked closely with QA, DevOps, and international clients to troubleshoot production issues and deliver reliable automation solutions.
- Participated in debugging, testing, and enhancing live production systems while ensuring code quality and stability.

NETSET SOFTWARE SOLUTION (Mohali)

June 2023- Nov
2024

PHP Developer

(Project: Renovatorz – Home Renovation Services Platform)

Technology Stack: Laravel, MySQL, REST API, Google Maps API, Stripe, JavaScript, HTML, CSS

- Developed a home renovation service platform connecting customers with nearby contractors.
- Built a custom real-time chat module enabling communication between customers and contractors.
- Integrated Google Maps API to display nearby contractors based on customer location.
- Implemented Stripe Payment Gateway for secure online booking and service payments.
- Developed secure RESTful APIs for contractor management, booking, customer profiles, and service requests.
- Designed optimized MySQL database relationships for users, contractors, bookings, and payments using Eloquent ORM.
- Implemented role-based authentication and authorization for Admin, Customer, and Contractor panels.
- Developed booking management, contractor profile management, and service request tracking.
- Optimized database queries and improved application performance for production deployment.

Project: Trust Hire – Multi-Role Hiring Platform

Technology Stack: Laravel, MySQL, REST API, JavaScript, HTML, CSS

- Developed a recruitment platform supporting multiple user roles including Admin, Employer, and Job Seeker.
- Implemented secure authentication and role-based authorization using Laravel middleware.
- Built responsive dashboards with role-specific features and dynamic statistics.
- Developed job posting, job application, candidate profile, and employer management modules.
- Created RESTful APIs for user management, job listings, and application workflows.
- Designed optimized MySQL database relationships using Eloquent ORM.
- Implemented advanced search and filtering for jobs, employers, and candidates.
- Added form validation, pagination, and secure CRUD operations across all modules.
- Improved application maintainability by following Laravel MVC architecture and clean coding practices.
